Trace Desk: an acquisition screen where every figure traces to its page

Template 1 IC screen memo as rendered at the asking price, firm expense floor on. Every figure comes from the figure registry; the web version links each to its document line.

Quillfield Commons (synthetic). Brackwater IC screen, 2026-10-28. Synthetic data.

Brackwater Capital (synthetic)

DEAL

40 apartments and 2 retail suites, asking $10,300,000, $257,500 per apartment unit (retail included in price). Broker T-12 NOI $664,950, 6.46%.

SUMMARY

> The OM shows NOI of $664,950 at a 6.46% cap on the asking price of $10,300,000. Underwritten NOI is $568,779.19 with a 5.52% going in cap under R1 and $563,541.19 with a 5.47% going in cap under R2, both against a 5.50% hurdle. Screen result is needs info because the decision depends on Suite B rent and Amendment No. 2, and all readings clear at $10,225,000.
>
> Model draft (gpt-5.4-mini-2026-03-17), passed the numbers gate

UNDERWRITTEN NOI

R1, rent roll: $568,779.19 with Suite B at $6,000.00 (rent roll and lease abstract).

R2, estoppel: $563,541.19 with Suite B at $5,500.00 (estoppel).

Bridge from the broker NOI, R1, rent roll: residential on rent roll basis -$22,876.50; retail -$11,180.00; non-recurring income removed -$18,500.00; T-12 footing -$1,200.00; water and sewer annualized -$3,150.00; expense floor from firm history -$10,400.00; management fee -$28,864.31.

Bridge from the broker NOI, R2, estoppel: residential on rent roll basis -$22,876.50; retail -$16,580.00; non-recurring income removed -$18,500.00; T-12 footing -$1,200.00; water and sewer annualized -$3,150.00; expense floor from firm history -$10,400.00; management fee -$28,702.31.

SCREEN

Going-in cap at $10,300,000, R1, rent roll: 5.52% against a 5.50% hurdle.

Going-in cap at $10,300,000, R2, estoppel: 5.47% against a 5.50% hurdle.

Result: Needs info: decision depends on Suite B rent; obtain Amendment No. 2.
All readings clear at $10,225,000.

DEBT

Synthetic Lender A terms. DSCR binds.

R1, rent roll: loan $6,158,000, 59.8% LTV, 9.24% debt yield, 1.25x DSCR, year-one cash-on-cash 2.62%.

R2, estoppel: loan $6,101,000, 59.2% LTV, 9.24% debt yield, 1.25x DSCR, year-one cash-on-cash 2.56%.

Going-in cap is below the 7.39% loan constant under every reading, so leverage lowers the cash yield.

WHERE THE PAPER AND THE NUMBERS DISAGREE

- OM occupancy counts pre-leased units: $45,000.00 (OM figure not relied on).
- OM in-place rent is gross of concessions: $9,000.00 (OM figure not relied on).
- T-12 footing error: $1,200.00 (Adjusted in underwriting).
- Non-recurring insurance proceeds: $18,500.00 (Adjusted in underwriting).
- No management fee in the T-12: $28,864.31 (Adjusted in underwriting).
- Suite B rent conflict: $5,238.00 (Needs review, both readings carried).
- Missing T-12 month, estimate used: $3,150.00 (Estimate, labeled).
- Expense floor from firm history: $10,400.00 (Policy normalization).

> The OM shows occupancy of 97.5% versus 37 occupied apartments in the rent roll, with 2 vacant units carrying applicant notes and no lease in the package. The OM in-place rent is $858,300 while the rent roll shows $804,300.00; $45,000.00 reflects pre-leased units and $9,000.00 reflects in-place concessions, so the OM figure is gross of concessions. The printed Sep 2026 expense total is $28,345.00 while the line sum is $29,545.00, a $1,200.00 footing error, and the T-12 management fee is $0.00 while policy adds $28,864.31. The T-12 also includes $18,500.00 of non-recurring income that is removed, and repairs, maintenance, and turnover are floored by $10,400.00 based on $950.00 per unit against a $1,210.00 median.

> Model draft (gpt-5.4-mini-2026-03-17), passed the numbers gate

OPEN ITEMS

- Suite B rent: decision-relevant at this price. Obtain Amendment No. 2.
- Water and sewer for Mar 2026: estimate used.

> Suite B: the rent roll and lease abstract show $6,000.00 and $6,000.00; the estoppel shows $5,500.00, citing Amendment No. 2, which is not in the package. T-12 collections match the estoppel at $5,500.00, which corroborates it, and the NOI effect between readings is $5,238.00. At $10,300,000, the conflict changes the screen result because the two readings produce $568,779.19 at 5.52% and $563,541.19 at 5.47%, while the clear price is $10,225,000.

RECOMMENDATION

Set by the reviewer: Advance, Counter at price, Hold for document, or Pass.

What this is

A screening workflow template on one synthetic broker package: an OM, a rent roll exported with stacked charge lines, floor subtotals and a repeated header, a T-12 with GL notes, lease abstracts and estoppels for two retail suites, a lender term sheet, a written firm screening policy and six prior screened deals. Rules parse the rent roll and T-12, reconcile them to their printed control totals, normalize income and expenses under policy N1 to N8, size debt under S2, and apply the hurdle under S1 and S4. Where documents disagree the desk carries every reading, and when the readings give different results it returns Needs info and names the document to request, with the price at which every reading clears.

How it is checked

An answer key written when the disagreements were planted, an independent Python recomputation with Decimal and half-up rounding, a lineage check from every memo figure to a source line or policy rule, an anchor-text check that each cited line shows the value, and a release gate that blocks simulated regressions. Results on this build:

- data.json schema: 0 issues
- 6 of 6 parsed rent roll totals equal the printed totals and the key
- 6 of 6 planted disagreements and 2 of 2 normalizations (M1, H1) found with exact type, outcome and amount
- 0 findings outside the answer key
- 4 of 4 decoys produce no finding and appear in Checked and agreed
- 8 of 8 bridges foot to the cent (OM NOI plus seven steps equals underwritten NOI, every reading, four states)
- 7 of 7 screen states match the key (base, floor off, counter price, $10,500,000, two missing months, deleted rent line, two open conflicts)
- 600 of 600 figures and results match the independent Python implementation (both readings, floor on and off, $10,300,000 and $10,225,000)
- 185 of 185 rendered figures in both templates resolve to source or policy anchors (base and floor off)
- 69 of 69 source and policy anchors: the cited line shows the figure's value
- Template switch: 110 figure values identical across both templates and equal to the registry (284 renders)
- Orphan-number scan: 0 memo renders with a number outside a figure placeholder; negative control caught 2 of 2 typed numbers
- 8 of 8 gate tests return the expected answer
- 9 of 9 model paragraphs pass the gate (0 replaced by rule drafts); 9 of 9 paragraphs shown pass; 9 API calls (cap 30)
- 4 of 4 simulated regressions blocked: printed T-12 totals trusted, Suite B resolved silently, blank months zero-filled, subtotal rows counted.
- Narrative paragraphs drafted by gpt-5.4-mini-2026-03-17 from a facts object, each passed through the numbers gate: 9 API calls, estimated cost $0.02 at an assumed list price. The model cannot set a number, an outcome or the recommendation.

Where the model and the reviewer sit

Rules find the disagreements and compute every figure. The model writes three paragraphs and may only write a number that equals the figure it tags; the gate also blocks recommendation language and any mention of Suite B that does not give both readings and name Amendment No. 2. The reviewer sets the recommendation and may adopt a reading with a logged reason. The evals run on the default state and never read reviewer actions.

Limits

- Documents are authored text pages, not PDFs or scanned spreadsheets; extraction is mocked. A pilot would first measure field-level extraction on the firm's own documents.
- Lease abstracts and estoppels are pre-abstracted. The policy and the prior-deal history are authored for this demo and do not describe any real firm.
- The same person planted the disagreements and wrote the answer key. The results show the logic, the lineage and the refusal behavior on a known case. They do not show accuracy on real documents, adoption by a deal team, or time saved.
- The closing cost rate is an assumption used only for equity and cash-on-cash.
- Nothing here describes how any Harvey product works.

Notice
